

## File Handling & Collections (List)

### Task 1

Write Code to Read file and implement following

- 1) User should enter the word
- 2) Display the line numbers where word is present.

*Note: Implement search utility*

### Task 2

Implement following Objectives

- 1) From already created class Account.
- 2) Write code to Store Account objects in an ArrayList.
- 3) Display all Accounts using foreach loop.
- 4) Filter Account on the basis of balance (range 1 and range2) and display using Iterator.
- 5) Filter out and display all Accounts where KYCVerification documents are pending. (Means null)
- 6) Filter all Accounts on the basis of CityName and store accountNumber & account holder name in the file.

Like

123 – Ramesh

145 – Amit

Store file name as : cityname+"\_Account"

*Note:*

- *Write code using proper naming convention, take logical variable names and code should be separated in UI Layer and Business Logic Layers.*
- *Code responsible to save in file should be in separate class*
